CELS 2021 BUSINESS AND TECHNOLOGY PREDICTION

CEL

Following GDPR, penalties for personal information leakage by Japan privacy law (Act on the Protection of Personal Information) had been strengthened in 2020. CEL's intelligence team follows this law trend, as well as technology and business trend. As we focus on mainly Asian security market, we have 100+ critical infrastructure company customers in Japan and handling 300+ security assessment projects in a year: Automotive, Manufacturing, Bank, Energy, Construction, Oil&Gas, and Government.

Here we illustrate the market problem and opportunity.

- Secure SDLC
- Our customer always worrying about security skill shortage of app developers. Security knowledge is needed early stage in software development lifecycle. If you do not engage security engineers into the team during early development stage, then the project will be delayed because of the security problem.
- False positives in network security

Some of our manufacturing customers are experiencing 1000 alert in a day. 99.9% of them are false positive. Even they had implemented Antivirus, Firewall, EDR tools, SIEM tools, they are worrying about how to utilize that tools with limited inhouse security staffs. Almost all national clients now depend on security outsourcing staffing company for that demand.

3. Talent skills mapping and evaluation criteria

Skills and staff shortage exist even in government and large enterprise. CIO and CISO should illustrate what types of talent is needed. But this is the most difficult question. They should clarify skills requirement and talent development plan. Additionally, they have to have evaluation criteria for inhouse security staff and outside vendors. Usually, CEL use international security standards like ISO27001, US NIST or local standards for making organizational and personnel skill building.

CEL's basic differentiation is a hybrid solution of AI and specialists for these 3 major problems. We think these 3 major problems will be more and more in 2021. CEL is continuously hiring and delivering security consultants, engineers, lawyers.

Enterprise Security Magazine is an enterprise technology magazine which reaches out to more than 41,000 qualified subscribers across the U.S., ABAC and Europe and over 87,000 digital subscribers across the globe. It is the go-to resource for senior-level technology buyers and decision makers to learn and share their experiences with products/services, technologies and IT trends. We provide a knowledge platform to CISOs and senior IT executives to share their experiences and learn from each other along with short but in-depth articles about top providers in the IT sector.
